

FOR PRE-VETTED EXTERNAL AUDIT FIRMS

Turn AI-Specific Audits Into a Repeatable, Evidence-Backed Practice

"Find an auditor, send documents, wait months" is how most AI-specific audits happen today. The AAIC Audit Marketplace replaces that with continuous, platform-mediated evidence access — direct access to source telemetry, not screenshots handed over on request.

WHAT YOU GET

Direct Access to Source Evidence

CAPABILITY	WHAT IT MEANS FOR YOUR PRACTICE
Merkle-chain audit trail	Verify the integrity of the entire history from a single root hash — not the client's word for it
Post-quantum timestamps	Audit Black Box records carry ML-DSA-87 (PQ Sign) timestamps — verifiable today and after quantum computing breaks classical signatures, relevant to your own long-term liability and retention obligations
Legal hold / e-discovery	Freeze and export encrypted evidence packages directly, without a manual client hand-off process
AAIC marketplace	Continuous, platform-mediated engagement — clients come to you already producing verifiable operational evidence, not a self-assessed questionnaire

WHAT WE DON'T CLAIM

RuntimeAI does not perform or certify audits itself. We are the platform and marketplace — your firm is the one performing the audit and issuing the attestation. RuntimeAI's role is making the underlying evidence real, continuous, and directly accessible, not standing in for your firm's own professional judgment or credentials.

Apply to join the AAIC marketplace

Bring your firm's AI-audit practice to clients already producing verifiable evidence.
