

FOR CISOS · CFOS · CROS · CEOS & BOARDS

AI Is Now a Board-Level Risk. Most Executive Teams Can't Answer Basic Questions About It.

How many AI agents do we run. What are they costing us. What's our real exposure. Is anyone watching right now. RuntimeAI answers all four from the same underlying telemetry — one governance layer, one real-time view per executive role, board-ready in minutes, not a slide deck assembled the week before the meeting.

ONE PLATFORM, FOUR VIEWS

The Same Telemetry, Your Role's Lens

CISO

Risk Posture

Agent risk score distribution, policy violations, kill switch activations, compliance framework status, NHI credential health

CFO

AI Spend

Total spend, budget utilization, cost per interaction, provider breakdown, 30-day trend, projected month-end overage

CTO

Fleet Health

Agent inventory, shadow AI sightings, platform reliability (p95, error rate, uptime), MCP server health

CRO

Risk Exposure

Composite risk score, risk heatmap (likelihood × impact), incident timeline with MTTR, regulatory exposure by framework

WHAT SITS UNDERNEATH

Portfolio Governance, Not a Point Product

DOMAIN	WHAT'S ACTUALLY THERE
Risk (CISO)	Real-time behavioral firewall, kill switch, 80+ compliance frameworks continuously monitored
Spend (CFO)	Per-agent LLM spend tracking, intelligent model routing, hard/soft budget limits
Fleet (CTO)	Agent Orchestration Factory, MCP Gateway (500+ integrations), platform reliability telemetry
Exposure (CRO)	Composite 6-signal risk scoring, cross-agent correlation, formal risk acceptances with review dates

WHAT WE DON'T CLAIM

We don't cite a third-party ROI study we don't have — no invented "X% ROI, Y-month payback" figure appears anywhere in RuntimeAI's materials. What we do have: a real, live, telemetry-backed answer to "how do you know your AI controls work," board-ready in about 5 minutes.

Compute Control Plane and Secure Token Factory (GPUaaS governance) are real, built, and deployed — but design-partner-stage, with no confirmed customer yet. If it comes up, we say so plainly.

WHO THIS IS FOR

**CISO**

Real-time risk posture, not a quarterly assurance memo

**CFO**

AI spend governed like any other cost center, not an IT mystery

**CRO**

One composite risk number instead of correlating six alert streams

**CEO / Board**

A defensible answer to "what's our AI exposure," not a guess

WHY THIS MATTERS

One Question, Four Honest Answers

THE QUESTION	RUNTIMEAI'S ANSWER
"How many AI agents do we run?"	A real, continuous inventory — registered and unregistered — not a guess from procurement records
"What's it costing us?"	Per-agent spend tracking with a CFO-ready dashboard, not an aggregate IT line item
"What's our exposure?"	A composite risk score from six real signals, refreshed continuously, not a point-in-time snapshot
"Is anyone watching right now?"	Yes — real-time enforcement across the fleet, with a kill switch that works in under 50ms if it needs to

Request a briefing

A real, board-ready view of your AI risk, spend, and fleet posture — in one session.
